Seed Treatment

Saltro A 'new and improved' Ilevo- no chlorosis in emerged soybeans.
Duo 2 fungicides and 1 insecticide for areas with low pressure; pair with Ilevo
Ilevo Strong against Sudden Death Syndrome and nematodes

How do we maintain quality control in our soybeans?

1. Starting at the combine; we harvest with a draper head, at a little higher moisture to ensure the soybeans have minimal damage
2. Conveyors transfer soybeans in and out of bins
3. The soybeans are run through a series of screens for sizing uniformity and air systems to clean out excess debris, weed seeds, and other material.
4. The soybeans are then run over a gravity table to separate by density and poor seed, as well as further separating trash, bugs, and dirt.
5. Finally, the soybeans are conveyed into bags or the seed treater, tagged, and sent to your farm!
